Summer and Winter Mode

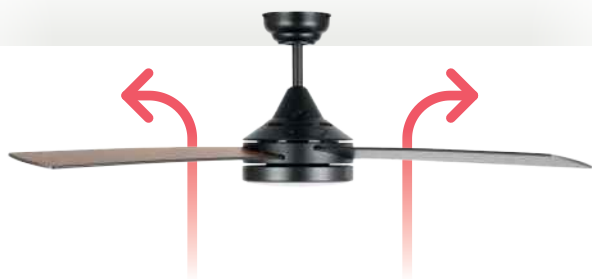

Ceiling fans offer two airflow directions that are perfectly adapted to the seasons. In summer, the forward rotation creates a cooling breeze and improves air circulation. In winter, the reverse rotation helps distribute warm air evenly throughout the room. This provides greater comfort and enhanced energy efficiency all year round.

Sommer- und Wintermodus

Deckenventilatoren bieten zwei unterschiedliche Luftstromrichtungen, die optimal auf die jeweilige Jahreszeit abgestimmt sind. Im Sommer sorgt der Vorwärtslauf für eine erfrischende Brise und verbessert die Luftzirkulation. Im Winter unterstützt der Rückwärtslauf die gleichmäßige Verteilung der warmen Luft im Raum. So genießen Sie das ganze Jahr über mehr Komfort und eine höhere Energieeffizienz.

Mode été et hiver

Les ventilateurs de plafond offrent deux sens d'air qui s'adaptent idéalement aux saisons. En été, la rotation vers l'avant crée une brise rafraîchissante et améliore la circulation de l'air. En hiver, la rotation inversée aide à répartir uniformément la chaleur dans la pièce. Vous profitez ainsi d'un confort optimal et d'une meilleure efficacité énergétique tout au long de l'année.

Clockwise Rotation (Winter Mode)

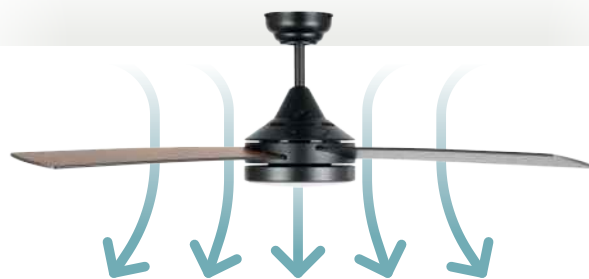

Recirculates the warm air near the ceiling, improving heat distribution throughout the room.

Rechtslauf (Winterbetrieb)

Lässt warme Luft von der Decke zirkulieren und verbessert so die Wärmeverteilung im Raum.

Rotation à droite (mode hiver)

Fait circuler l'air chaud accumulé au plafond et améliore ainsi la répartition de la chaleur dans la pièce.

Counterclockwise Rotation (Summer Mode)

Creates a downward airflow for natural cooling.

Linkslauf (Sommerbetrieb)

Erzeugt einen nach unten gerichteten Luftstrom für natürliche Kühlung.

Rotation à gauche (mode été)

Génère un flux d'air dirigé vers le bas pour un rafraîchissement naturel.

+

More efficient together: save up to 30% energy

With a fan, the air conditioning thermostat can be turned up by several degrees without compromising on comfort – and energy consumption is significantly reduced. When used together, the air conditioning can be set to a higher temperature. The air movement makes the room feel 2-4°C cooler – the air conditioning has to work less hard.

Gemeinsam effizienter: bis zu 30 % Energie sparen

Mit einem Ventilator lässt sich das Klimaanlage-thermostat um mehrere Grad erhöhen, ohne Komfortverlust – und der Energieverbrauch reduziert sich deutlich. Bei gemeinsamer Nutzung kann die Klimaanlage auf eine höhere Temperatur eingestellt werden. Der Raum wirkt durch die Luftbewegung 2-4°C kühler – die Klimaanlage muss weniger leisten.

Plus efficace ensemble : économisez jusqu'à 30 % d'énergie

Un ventilateur permet d'augmenter le thermostat de la climatisation de plusieurs degrés sans perte de confort, tout en réduisant considérablement la consommation d'énergie. En cas d'utilisation commune, la climatisation peut être réglée à une température plus élevée. Grâce au mouvement de l'air, la pièce semble plus fraîche de 2 à 4 °C, ce qui réduit la puissance nécessaire à la climatisation.

Comfort that adapts to your daily life

With multiple speeds, a timer, and gentle controls, the fan can be precisely adjusted to your desired comfort – ensuring pleasant air circulation and a personalized indoor climate.

Komfort, der sich Ihrem Alltag anpasst

Mit mehreren Geschwindigkeiten, Timer-Funktion und sanfter Steuerung lässt sich der Ventilator genau auf Ihren Wunschkomfort einstellen – für angenehme Luftzirkulation und ein individuell abgestimmtes Raumklima.

Un confort adapté à votre quotidien

Avec plusieurs vitesses, une fonction minuterie et une commande douce, le ventilateur peut être réglé exactement selon tes souhaits, pour une circulation d'air agréable et un climat ambiant personnalisé.

Lighting meets air comfort

Selected models combine lighting and ventilation with CCT, RGB, and dimming functions – creating the perfect atmosphere along with refreshing airflow.

Lichtstimmung trifft Luftkomfort

Ausgewählte Modelle kombinieren Beleuchtung und Belüftung mit CCT-, RGB- und Dimmfunktionen – für die perfekte Atmosphäre und erfrischende Luftbewegung.

Ambiance lumineuse et confort d'air

Certains modèles combinent éclairage et ventilation avec des fonctions CCT, RGB et de gradation – pour créer l'atmosphère idéale et un flux d'air rafraîchissant.

Clear size guidance

Ceiling fans should match the size of your room. Our two size categories cover typical room dimensions and ensure optimal air circulation.

- Standard fans: wide, even airflow – ideal for large or open spaces.
- Compact models: targeted airflow – perfect for smaller areas or zones that require direct cooling.

Klare Größenorientierung

Deckenventilatoren sollten zur Raumgröße passen. Unsere zwei Größenkategorien decken typische Raummaße ab und sorgen für optimale Luftzirkulation.

- Standardmodelle: breiter, gleichmäßiger Luftstrom – ideal für große oder offene Räume.
- Kompakte Modelle: gezielte Luftzirkulation – perfekt für kleinere Bereiche oder Zonen, die direkt gekühlt werden sollen.

Orientation claire des tailles

Les ventilateurs de plafond doivent correspondre à la taille de la pièce. Nos deux catégories de tailles couvrent les dimensions typiques et garantissent une circulation optimale de l'air.

- Modèles standards : flux d'air large et uniforme – idéal pour les grandes pièces ou les espaces ouverts.
- Modèles compacts : circulation d'air ciblée – parfait pour les petites zones ou les espaces nécessitant un refroidissement direct.

SAYULITA 1

These fans fascinate with an integrated RGBW rainbow effect. The dynamic combination of several RGB colours creates an impressive and vibrant play of colours.

Diese Ventilatoren faszinieren mit einem integrierten RGBW-Regenbogen-Effekt. Die dynamische Kombination mehrerer RGB-Farben sorgt für ein beeindruckendes und lebendiges Farbenspiel.

Ces ventilateurs fascinent avec un effet arc-en-ciel RGBW intégré. La combinaison dynamique de plusieurs couleurs RGB assure un jeu de couleurs impressionnant et vivant.
